

## WHY RISK YOUR FAMILY'S FUTURE ? EATING GERMS, BACTERIA AND HARMFUL TOXINS UNCONSCIOUSLY ?

Detoxify your food, the only way your food to be **99.99%** Clean and Safe

### WHEN IS CLEANING NO LONGER CLEAN

Every time you eat, whether dining out or even eating home-cooked food, your body becomes a toxic dumping ground. This also affects unborn children. Tests were done on the blood of newborn babies revealed that about 200 types of industrial chemical were present in their bloodstream. This was before they even drew their first breath! Most of it is due to what we eat. The fresh-looking groceries from the stores may look picture-perfect, but invisible to our eyes, are growth hormones, antibiotics, preservatives, coloring... and not counting the common germs and bacteria. By simply washing vegetables and fruits with our household filtered water is not enough to remove these harmful substances. Luckily, nature provides a solution. A natural solution that is innovated into the Okamizu Process to cleanse everything from the air we breathe to our food we eat and water we drink.

## BENEFIT / USAGE

**MEAT & POULTRY**  
Duration : 30 minutes  
Detoxifies residues of antibiotics in the meat and poultry and removes fats and chemical additives in animal feed.

**SEAFOOD & FISH**
